Dear Mr. Poliquin:

Comment 3

I believe the revised RBC rule penalizes credit unions for specific activities such as real estate lending, member business lending, and credit unions chartered to assist the un-bankable by placing a capital tax on the resulting assets of low income or poor credit lending. We believe the end result will be thousands of homogenous balance sheets in 2025 that you can easily understand from a supervisory perspective. However, this current risk posture of the NCUA cannot fail but to lead credit unions to shy away from diversity or cooperative reason for the charter and field of membership. The end result of this rule will ultimately force credit unions into potential areas of investment and lending that the credit union lacks experience with or create industry wide concentrations that could be impacted by similar economic variables. In and of itself, this rule creates more risk than it proposes to control.

Although Congress has stated NCUA must develop risk based capital standards and they must be formulated in a similar fashion as the banking industry, we do not believe Congress wished to create a tax on members and abandon the cooperative principals of credit unions. Since the publication in the Federal Register the actual costs associated with this capital tax have been challenged. Recently NAFCU published an estimate that credit unions will need to raise an additional \$760 million dollars in capital to achieve their current capital levels. Because credit unions only have one source of earnings, that additional capital tax must come directly out of our members' pockets through a reduction in savings rates, increase in loan rates, and potentially changes to transaction fees. We believe NCUA's estimate falls far short of the actual cost to the industry and again focused on the potential risk to the insurance fund rather than those they regulate and ultimately their members . In an effort to remain the best financial resource for our members, we would encourage the NCUA to withdraw the proposed rule altogether.
